

Children's Healthy Weight CollIN

COIIN'S IMPACT

For three years, 26 CollINs in 12 states developed strategies to improve the health of children ages 0-21, including those with special health care needs. With ASPHN's support, states formed diverse teams and collaborated to develop new and innovative programs. They strengthened partnerships, leveraged existing resources, addressed health equity, created stronger systems and broke down silos within public health. They also created toolkits, information resources, school physical activity programs, nutrition-related classroom materials, new and enhanced policies and vital community outreach. The result? Mothers and children in rural, urban and mixed settings across the country benefitted from these innovative initiatives and often contributed to their development as trusted partners and advisors.

COIIN WORKSTREAMS

Three workstreams addressed children's health from birth to early adulthood.

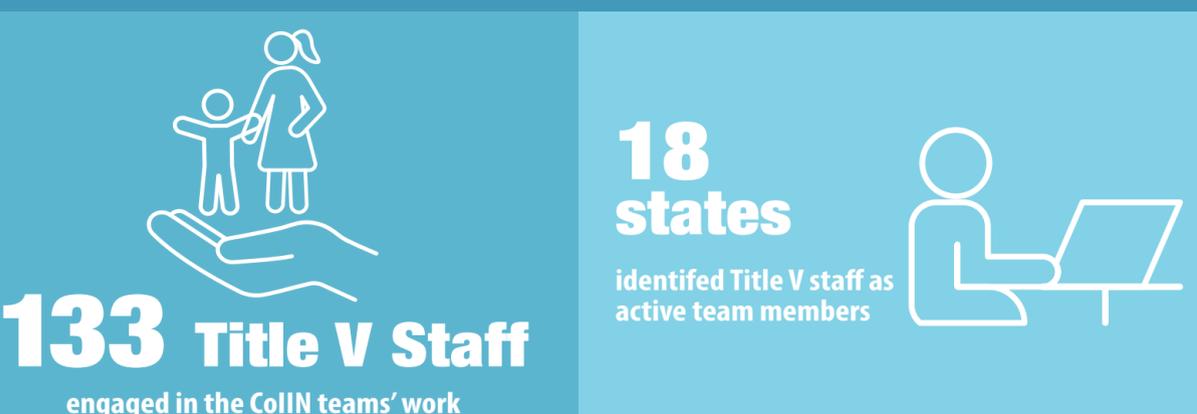

IMPLEMENTATION

Teams implemented innovative projects serving their states' specific needs and unique populations.

TITLE V STAFF ENGAGEMENT

Title V participation helped maximize the impact of the CollIN by offering expertise, information, feedback and resources to the CollIN teams.

PARTNERSHIPS

Teams worked collaboratively across multiple state programs, divisions and departments, non-profits, universities and the private sector.

POLICIES

CollIN team policies addressed support for nursing mothers and opportunities for physical activity and nutritional support for children, providing clarity and guidance for organizations.

GOALS

Teams identified needs within their states and used the driver diagrams and PDSA cycle to develop innovative projects and meet their goals.

“Joining forces for healthy food sources.”
